

:::: Scope of Work Document

Project Title: Kitchen Organizer

Deliverables:

My application for this class will be a combination of a recipe finder and a pantry. The user will be able to add ingredients to the pantry and then ask for a few recipes using the ingredients that they entered.

Milestones:

Core Features(min 3)

- 1. User can enter and take out food items**
- 2. When the user gives food ingredients, show possible recipes for the ingredients shown**
- 3. User can enter new recipes that the program can store for future use.**

Special Features - How do you want it to work in the future after you have more time to develop the idea and your programming skills? I would like to be able to create a UI where the user will be able to directly interact with the pantry and/or once the user is looking at recipes, they will either be able to go to the direct place where that recipe is on the internet or they can store recipes themselves to be used for public or private use. I would also like to develop a local database with SQL that would hold all of the recipes and allow for the app to take recipes from users and share them if they would want.

Timeline: FINAL PROJECT & PRESENTATION: Jul 2, 2025.
